

Guideline for the plugfest at Prague

February 21st, 2018

Ryuichi Matsukura

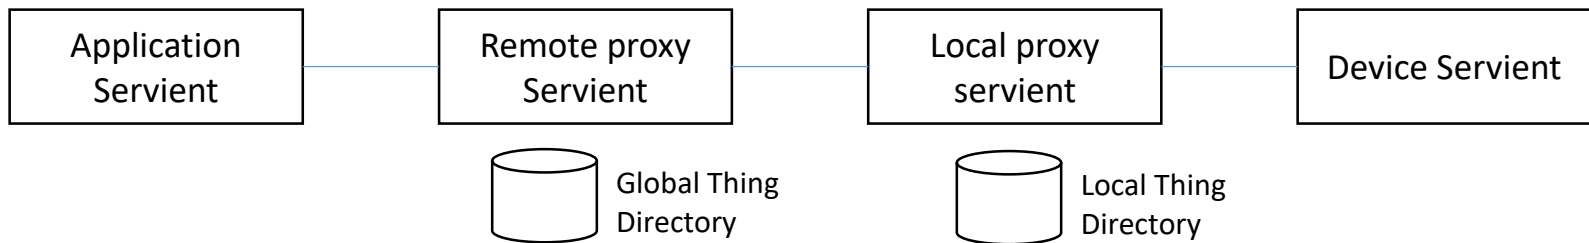

Fujitsu Laboratories Ltd. / Fujitsu Ltd.

Check list for the next plugfest

- 2 points for the plugfest
 - Basic sequence
 - Registry of devices, Discovery(Thing directory), Read and Write property operation, Event operation, and Unregistry
 - Other aspects
 - Security, Protocol binding, Semantic integration, ...
- But we have just one month, so should focus on some points that participants will implement
 - Share your servient information
 - Devices servients and Application servients
 - Interfaces that these servients support

Fujitsu implementation

- 4 layered servient model
 - Proxy servients have thing directories
 - TDs registered to local thing directory automatically synchronize to the global directory.

- In the last plugfest, many applications and devices could connect with Fujitsu proxies

Please share your interests

- Fujitsu has interest on the basic sequence
 - Registry of TD
 - Discovery
 - ReadProperty and WriteProperty operations
 - Event operation
 - Fujitsu will implement these functions for next plugfest
- Fujitsu want to supports other issues
 - Secury, protocol bindings,
 - Could you share the ideas
